MUSIC, DIRECTED.

Brand system.

Two currents. One performance.

CONFLUX

THE CONFLUX VISUAL IDENTITY

Version 1.1
15 October 2026

Human expression. Machine direction.

CONFLUX helps a performer arrange the set while keeping the expressive mix in their hands.

CONFLUX is an open-source Linux DJ application concept: AI helps choose tracks and coordinate transitions; the performer shapes the sound with EQ and effects.

The name describes currents meeting. Two matching orbital currents turn 180 degrees around a centered, rounded hexagonal nucleus: movement with balance, energy with control.

01

PERFORMANCE FIRST

Decisions should make space for listening, timing and expressive control.

02

CALM UNDER PRESSURE

Clear hierarchy, stable placement and explicit status belong on every screen.

03

OPEN BY DESIGN

A Linux-native identity with useful assets and transparent, inspectable behavior.

04

ENERGY WITH INTENT

Use red to direct attention; let rhythm and proportion create the atmosphere.

TWO CLEAR OWNERS

DIRECTOR / Track selection, cues, transport, timing and crossfade.

LIVE MIX / Performer-owned EQ and effects. Automation never silently takes over these controls.

A recognizable meeting of currents.

The approved symmetric rounded-hex mark is the master. Use the supplied outlined artwork; never rebuild it from type.

THE SYMBOL

Equal currents, rotated 180 degrees. A centered flat-top hexagon with softened corners. R101 / corner setback 18.

CONFLUX

CUSTOM WORDMARK

Tall, condensed forms carry the name. The red diamond inside the X connects the wordmark to the symbol's directional energy. Letter shapes and spacing are fixed artwork.

APPROVED COMPOSITIONS

HORIZONTAL

STACKED

MASTERS

SVG for scaling and export. PNG for raster placement. Light and dark variants are intentionally different. Use one-color black or white masters when color cannot reproduce.

Give the identity room to breathe.

Clear space protects the silhouette. Minimum sizes protect the details.

x = CORE FLAT-TO-FLAT HEIGHT

x is the hexagon's flat-to-flat height (174.94 master units). Keep at least 0.5x clear around every logo's outer visible bounds.

MINIMUM REPRODUCTION

Horizontal lockup	180 px / 40 mm
Stacked lockup	140 px / 32 mm
Wordmark	120 px / 28 mm
Standard symbol	32 px
Simplified symbolic mark	16-24 px

Pixel values are nominal screen sizes. Use the supplied small-size assets and inspect the final raster at 100%. Print values assume a clean production process.

NEVER

Distort

Do not stretch, skew or change stroke proportions.

Recompose

Do not move the nucleus, change the red diamond or retype the name.

Decorate

No shadows, gradients, glow, outlines or perpetual rotation.

Signal, structure and breathing room.

The signature red carries energy. Charcoal and ivory provide the stable field around it.

SIGNAL	CHARCOAL	IVORY
#FF3030	#24252B	#FAF9F6

Use signature red for the brand mark, high-level emphasis and selected visual accents. It is not the default color for every interactive element or every line of text.

Build interfaces from semantic theme roles. Theme-specific accent, primary and deck colors keep the identity usable in both bright rooms and dark performance spaces.

SEMANTIC SUPPORT / LIGHT AND DARK PAIRS

DECK A	DECK B	SUCCESS	WARNING
#00786F / #58D6C3	#9A5E00 / #F2C568	#197B59 / #6ED9AE	#92620A / #F5C469

A color is a role, not the only cue. Deck labels, icons, focus outlines and text must carry the same information.

One identity. Two working environments.

Light and dark themes share hierarchy and behavior; each has tuned contrast and state colors.

LIGHT / DAY SESSION

Canvas	#FAF9F6
Surface	#FFFFFF
Raised	#F0EFEB
Text	#24252B
Muted	#5D626A
Accent	#B92323
Divider	#747A83
Primary	#C52524

PRIMARY ACTION

Aa / 123.00

DARK / PERFORMANCE

Canvas	#111317
Surface	#1A1D22
Raised	#24282F
Text	#F5F4F0
Muted	#B5B7BE
Accent	#FF877D
Divider	#505660
Primary	#FF5B50

PRIMARY ACTION

Aa / 123.00

Honor the system theme initially, then remember the performer's explicit setting. Dark control boundaries use #78808A; #505660 is for decorative dividers. Use darkAccent for keyboard focus.

Contrast is a specification, not a guess.

Ratios below are computed from the actual sRGB tokens using the WCAG relative-luminance method.

THEME	FOREGROUND / BACKGROUND	RATIO	TARGET
LIGHT	Body text / surface	15.28:1	Text AA
LIGHT	Muted text / surface	6.14:1	Text AA
LIGHT	Accent text / surface	6.31:1	Text AA
LIGHT	White / primary button	5.73:1	Text AA
LIGHT	Essential border / surface	4.33:1	UI 3:1
LIGHT	Deck A / surface	5.36:1	Text AA
LIGHT	Deck B / surface	5.28:1	Text AA
DARK	Body text / surface	15.35:1	Text AA
DARK	Muted text / surface	8.43:1	Text AA
DARK	Accent text / surface	7.25:1	Text AA
DARK	Canvas ink / primary button	6.08:1	Text AA
DARK	Essential border / surface	4.23:1	UI 3:1
DARK	Deck A / surface	9.51:1	Text AA
DARK	Deck B / surface	10.43:1	Text AA

TWO IMPORTANT EXCEPTIONS

Signal on ivory: 3.49:1. Suitable for large text and brand graphics; use lightAccent for normal-size links and labels.

Dark divider on surface: 2.29:1. Decorative only. Essential boundaries use darkControlBorder (#78808A); focus uses darkAccent.

AA text: 4.5:1. Large text and essential UI graphics: 3:1. Rounded ratios are for display; pass/fail uses unrounded values. Contrast alone is not a full accessibility audit.

Condensed energy. Unhurried reading.

The logo is custom artwork. The supporting type system is open and practical.

DISPLAY / BARLOW CONDENSED SEMIBOLD

SHAPE THE MOMENT.

BODY AND INTERFACE / BARLOW

Keep the music in motion.

Clear labels, readable metadata and predictable spacing make a complex performance surface feel calm. Use sentence case for body copy and controls.

DATA / JETBRAINS MONO

`128.00 BPM / 08:32 / -03.5 dB`

DIGITAL SCALE

Hero	64/68
Page title	40/44
Section title	28/32
Body / UI	16/24
Secondary	14/20
Label	12/16
`Technical data`	14/20

Values are CSS px / line-height for digital implementation. This PDF uses a separate editorial scale. Avoid condensed text for dense metadata or long paragraphs.

The symbol carries the app.

Launcher icons are a focused expression of the identity, not a miniature logo composition.

DARK TILE

LIGHT TILE

The symbol occupies roughly 76% of the square tile. Use the supplied launcher tile without adding another frame. For surfaces that apply their own mask, use the full-bleed maskable asset and preserve its safe area.

PROVIDED SIZES

16 / 22 / 24 / 32
48 / 64 / 128
256 / 512 / 1024

SMALL-SIZE DISCIPLINE

Use the simplified symbolic mark at 16-24 px. At 32 px and above, use the standard symbol. Avoid the wordmark, fine rules and soft shadows in launcher icons.

16 px

22 px

24 px

32 px

48 px

64 px

Recognizable before the page loads.

Use one coherent mark across the browser tab, installed web shortcut and project communications.

Included social preview / 1200 x 630 px

WEB FILES

`favicon.svg`

Scalable browser icon

`favicon.ico`

Legacy 16/32/48 px fallback

`apple-touch-icon.png`

180 px touch shortcut

`android-chrome-192x192.png`

192 px install icon

`android-chrome-512x512.png`

512 px install icon

`site.webmanifest`

Linked install metadata

SOCIAL AVATAR

Use the symbol alone on charcoal or ivory. Keep it centered in the safe area and check a circular crop. The full name belongs in the profile name, not inside a tiny avatar.

SOCIAL COVER

Use the horizontal or stacked master with a short message. Respect 0.5x clear space, keep text away from crop edges, and preview the actual service's mobile framing.

Website and social placements shown in this guide are design concepts. No account, domain, product availability or launch status is implied.

Controls that stay readable in the moment.

Small, repeatable rules connect the brand to usable performance software.

ACTION HIERARCHY

START DIRECTOR

REVIEW NEXT

CANCEL

One primary action per local task. Use text labels for consequential transport actions and pair state colors with explicit status.

LAYOUT RHYTHM

4 / 8 / 12 / 16 / 24 / 32

Use a 4 px spacing base. Prefer 8 px within controls, 16 px within groups and 24-32 px between task areas. Keep dense data aligned to a stable grid.

FOCUS / STATE

NEXT TRACK

Northbound / Extended mix

A visible 2 px focus ring with separation from the control edge. Keep keyboard order aligned with the visual reading order.

MOTION

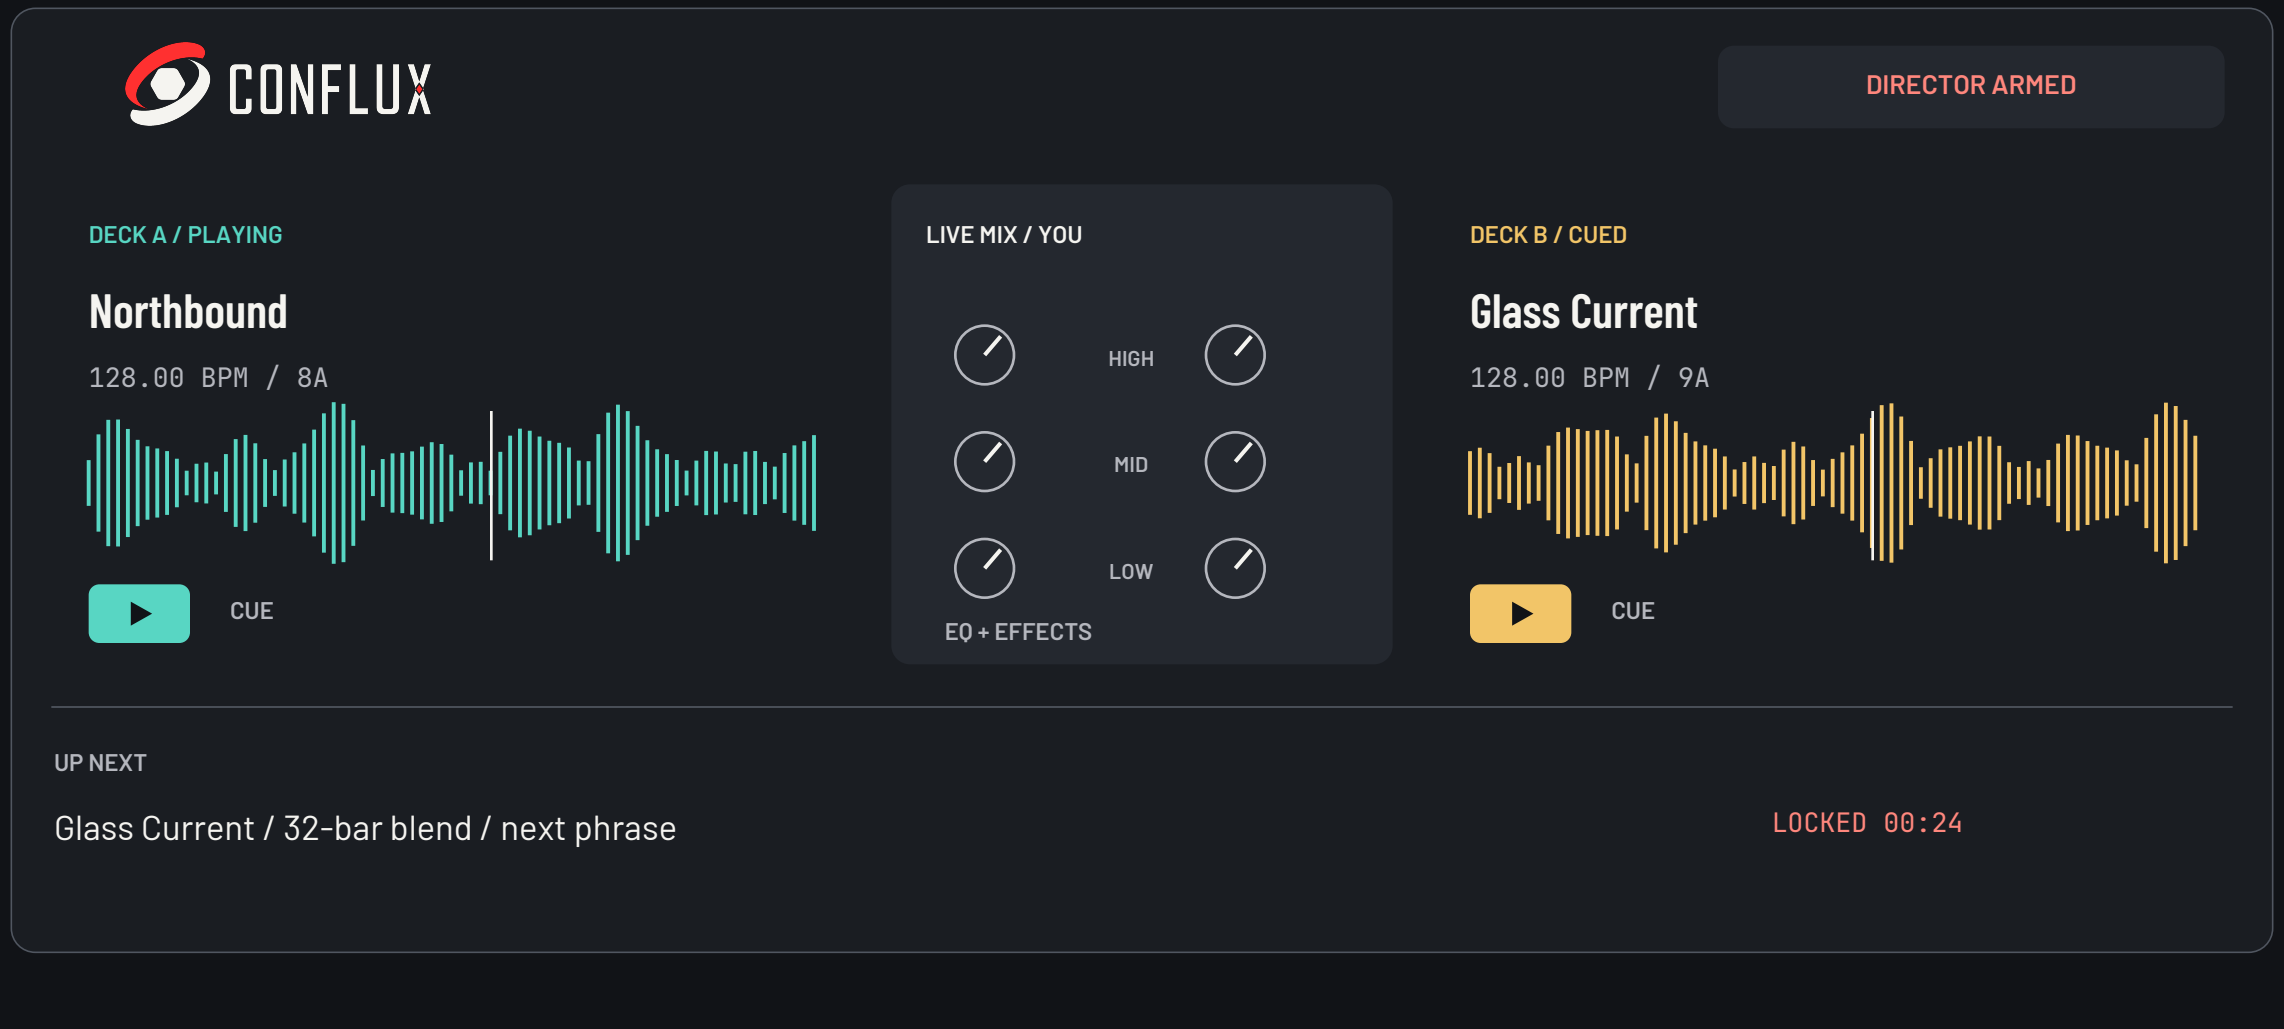

```
160 ms / micro interactions
240 ms / panel transitions
```

Animate state changes, not the identity itself. Respect reduced-motion settings; keep essential status understandable when animation is removed.

Never rely on hover, sound or color alone. Use persistent labels, visible focus and clear stopped/armed/playing states. These rules are design requirements for implementation, not a claim of completed accessibility testing.

The director arranges. You shape the sound.

Concept interface / illustrative data / not a screenshot of a shipped application.

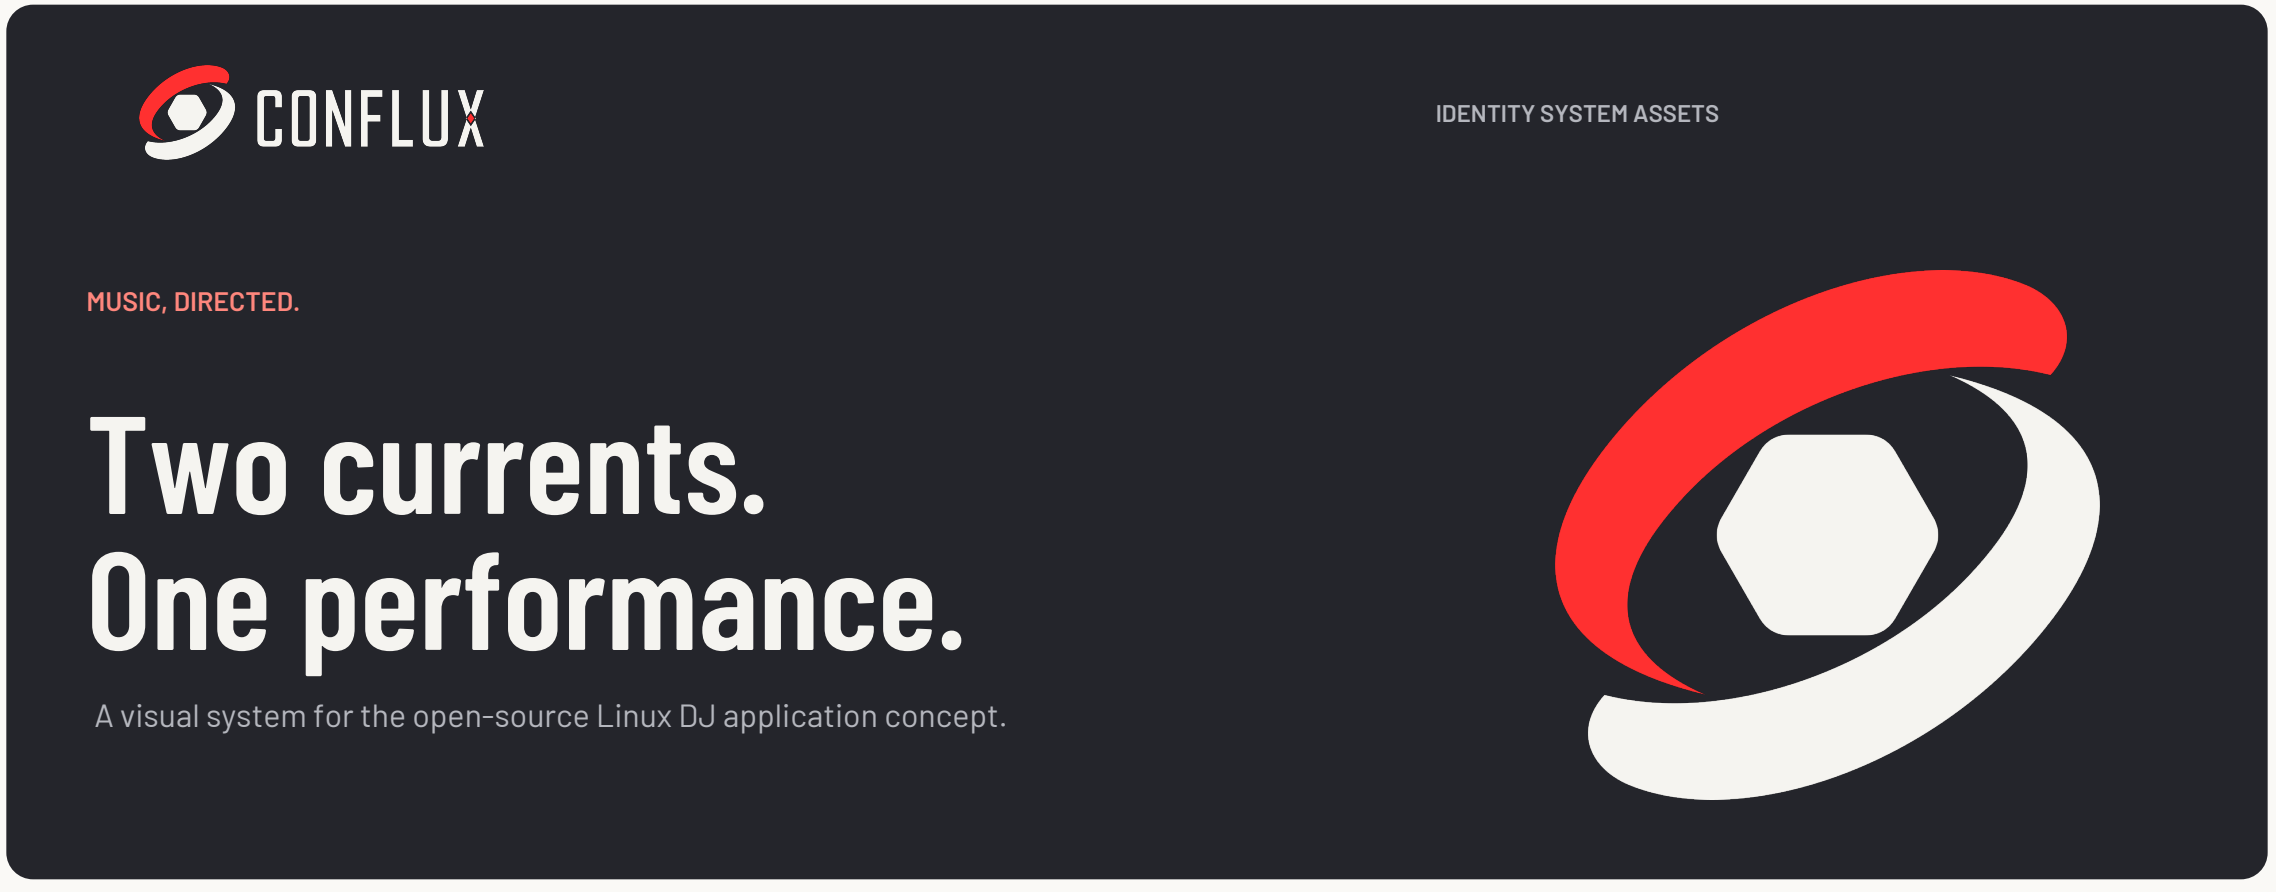

DESIGN INTENT

DIRECTOR owns selection, cues, transport, timing and crossfade. Keep its plan visible before execution, with a clear hold or takeover control.

LIVE MIX keeps EQ and effects under the performer's hands. Theme-specific deck colors identify sources without competing with the red brand signal.

A stage for the identity.

Concept layout / visual direction for the included brand website.

COMPOSITION

Give the logo a calm field. Pair one strong condensed headline with short, plain body copy. Alternate ivory editorial sections with deep charcoal moments.

WEB IMPLEMENTATION

Use semantic HTML, real text and the CSS tokens. Honor reduced motion. Keep the downloads easy to locate and preserve visible keyboard focus in both themes.

Confident, specific and in time.

CONFLUX sounds like a capable collaborator beside the decks: direct, calm and musically aware.

DIRECT

Say what will happen and when. Use concrete musical actions.

TRANSPARENT

Make automation state and control ownership visible.

HUMAN

Respect the performer. Offer clarity without hype or judgment.

USE	AVOID
Next transition in 32 bars.	The AI is about to work its magic.
Hold this track.	Disengage the autonomous orchestration subsystem.
Director paused. You control the decks.	Something went wrong.
EQ and effects stay with you.	Fully automatic perfection.

Write the name as **CONFLUX**. Keep the tagline exactly **Music, directed.** Use sentence case for controls. Prefer musical units such as bars and beats when they help the performer act; expose technical detail only where useful.

Native assets. Predictable behavior.

Use the same identity from KDE's launcher to the Qt interface and the project website.

DESKTOP INTEGRATION

Install application icons into the hicolor theme at the provided sizes, using one stable application icon name. Include the scalable SVG in the corresponding scalable/apps location.

```
share/icons/hicolor/48x48/apps/
org.example.Conflux.png

Icon=org.example.Conflux
```

The example ID is a placeholder. Replace it with an identifier under a domain the project controls before packaging. Match icon, desktop-entry and application metadata IDs.

SMALL CONTEXTS

Use conflux-symbolic.svg for compact system surfaces when appropriate; allow the host theme to supply foreground color. Preserve the launcher tile for full-color application identity.

QT THEME CONNECTION

Treat brand-tokens.json as the portable source of color roles. The supplied conflux.qss supports Qt Widgets; Qt Quick should map the same roles into its own theme properties.

WINDOWS AND SCALE

Keep Wayland and Xorg behavior within Qt's platform integration. Use scalable artwork or appropriate raster density; verify the launcher, title bar, tray and interface at real target scale factors.

RELEASE REVIEW

Check light/dark variants, 100% and 200% scaling, keyboard focus, reduced motion, and an actual KDE session. The brand pack provides identity assets, not a completed desktop integration.

Reference: KDE Human Interface Guidelines / Icons; freedesktop.org Icon Theme Specification. Links are listed on page 16.

A usable system, ready to carry forward.

Keep the supplied masters and naming intact. Record product decisions before a public release.

PACK CONTENTS

`assets/logos/`

Light/dark lockups, wordmarks and symbols; SVG masters and PNG companions.

`assets/app-icons/`

Full-color tiles and raster sizes from 16 to 1024 px.

`assets/favicons/`

SVG, ICO, touch and install icons; web manifest.

`assets/fonts/`

Barlow, Barlow Condensed, JetBrains Mono and accompanying OFL notices.

`tokens/`

Portable JSON, website CSS and Qt Widgets QSS theme tokens.

`index.html / PDF`

Brand website and this reference guide.

PERMISSIONS AND RELEASE STATUS

No open-source software license has been selected in this brand pack. The project's open-source intent does not itself grant software redistribution or modification rights. Choose and document the code license before release.

The bundled fonts use the SIL Open Font License. Retain each font's bundled copyright and license notices when redistributing font files. The custom outlined wordmark is artwork, not a font file.

Brand assets and software are separate licensing decisions. This guide does not establish trademark clearance, transfer rights, or grant an unrestricted public brand license. Record asset permissions explicitly in the project's release documentation.
